Table Bot · a working WhatsApp booking demo

Built for Sucre Brasserie

Where the bookings leak today, and what a WhatsApp assistant recovers in 30 days. Dubai, September 2026.

Where you are today

The phone is your booking system. It is off most of the day.

28%

of calls to businesses go unanswered. During lunch and dinner peaks it passes 30%.

78%

of guests who hit an unanswered call give up on that business. 82% call a competitor instead.

51%

of restaurant calls arrive after 5 pm, exactly when nobody can pick up.

Sources: CallRail 2025 (28%; n=1,000 consumers for 78% and 82%) · BrightLocal, 45,264 restaurant listings (51%) · Nextiva 2025 peak-window benchmarks.

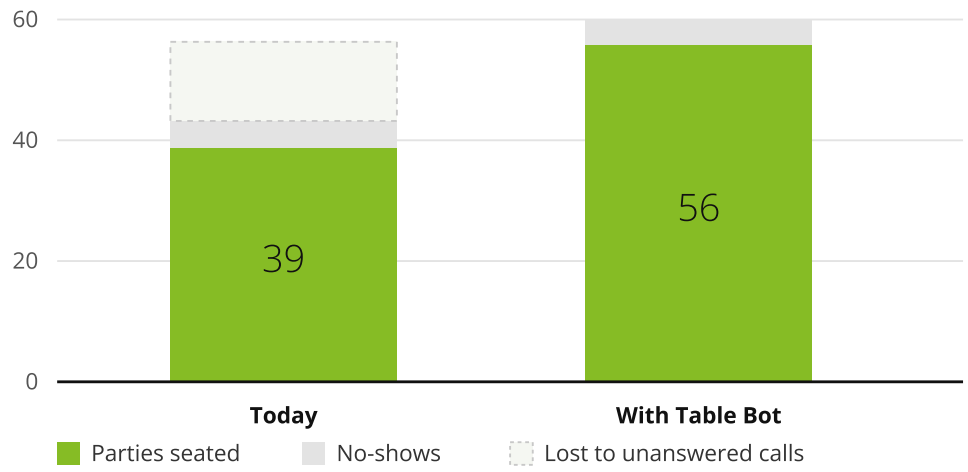

What we saw at Sucre Brasserie

A good-looking site with no booking button, no phone and no email on the homepage. Guests end up on Instagram hunting for a link in bio.

Seen on the public web on 23 September 2026. Sources on request.

One week of bookings, modelled

Same 60 guests trying to book. Two very different Saturdays.

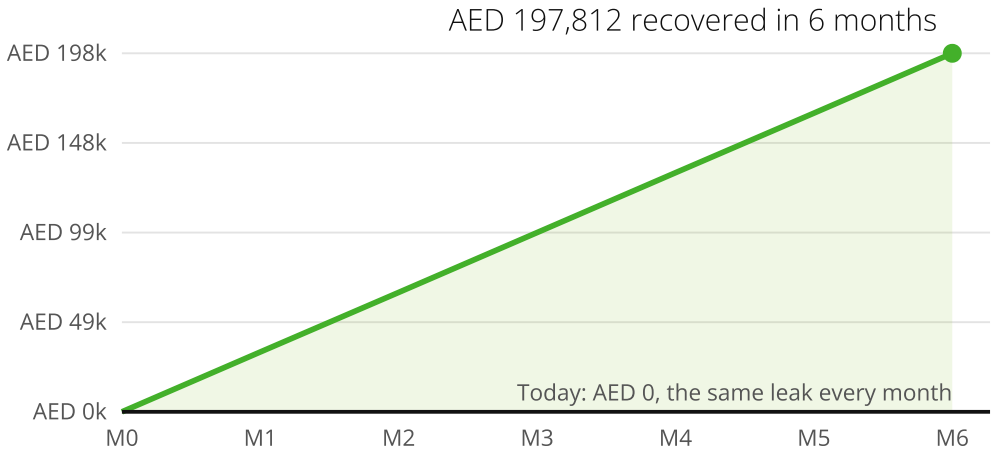

Per week	Today	With Table Bot
Booking attempts	60	60
Answered	43	60
Lost to unanswered calls	13	0
No-shows	4	4
Parties seated	**39**	**56**

Model, not your books: 60 attempts a week, 28% unanswered (CallRail 2025), 78% of those never come back (CallRail 2025), 10% no-shows (industry range 5–20%), reminders cut no-shows by 30% (ResOS 27%, Hostie 28–32%). Your real numbers come out in the 10-minute walkthrough.

What that is worth

AED 7,614 a week. AED 32,969 a month. Same kitchen, same staff.

+17

extra parties seated per week

AED 150

assumed spend per cover, 3 covers per table

Why WhatsApp and not another app

98% of texts are opened, against about 20% of emails. 59% of diners prefer to book online, half of them on a phone. In the UAE, 95% of guests are comfortable with AI in the booking experience and 44% are happy to book over chat or text.

How it works

The guest messages. The bot does the rest. You stay on the floor.

1 · Guest messages
"Table for 4 tonight?" on your existing WhatsApp number. No app, no form.

2 · Bot offers slots
Reads your floor plan and hours. Offers 2 real times. Asks about allergies and occasions.

3 · Confirmed in 30 seconds
Booking lands in your sheet or SevenRooms. Guest gets a confirmation they can find later.

4 · Reminder, then review
Reminder 3 hours before with one-tap reschedule. Two hours after the visit, a polite nudge to Google.

The switch. ON, it answers every message, day or night. OFF, it stops within 2 minutes and your team takes over. Nothing is sent that you have not approved in the first week.

Your number
Runs on the WhatsApp line you already print on the menu.

Your tone
Trained on how your team actually speaks to guests. Arabic and English.

Your data
Bookings stay in your system. Nothing shared, nothing resold.

Human on demand
Anything the bot cannot answer is handed to a person with the full thread.

What it costs to look

Nothing. Ten minutes at Sucre Brasserie.

We show it running on your number, with your name on it. If it does not fit, we shake hands and that is it.

See it now

Open the live demo on your phone:

https://www.brxdxb.com/table/#Sucre-Brasserie

Type your restaurant's name into the box and the chat rewrites itself.

Step	When
10-minute walkthrough at the restaurant	This week
Bot live on your number, your team approves every reply	Week 1
Reminders and review nudges switched on	Week 2
First month's numbers on one page	Day 30
